Optomap Imaging Information & Authorization

Dr. Girardi and his staff at See Sharp Eyewear strive to provide the newest technology and best medical care possible. We proudly offer the Optomap Daytona technology to assist in retinal examination. As a non-invasive and instantaneous procedure, the Optomap is highly recommended and is an alternative to pupil dilation for many patients.

When your pupils are dilated with drops, your vision can be impaired, your eyes become very light sensitive, and the doctor is able to view only a 45 degree snapshot of your eye at a time. The Optomap takes a more sophisticated, ultra-wide digital image of your retina, allowing an even more thorough examination of your eyes. A 200 degree broad-view photo is taken and called up on the computer during your exam. This in-depth photograph allows for Dr. Girardi to better examine, evaluate, and treat your eye health. The image also provides for a permanent physical documentation of the retina.

The Optomap retinal imaging can assist in diagnosing and treating:

Retinal Problems, Macular Degeneration, Glaucoma, Optic Nerve Diseases, Retinal Detachments, Diabetes, High Blood Pressure, Cardiovascular Disease, and Precancerous and Cancerous Lesions.

Dr. Girardi strongly encourages all of his patients to have the Optomap performed annually at their comprehensive eye health examination. Dilating eye drops are generally not needed with the Optomap so your vision will not be blurry or light sensitive, allowing you to drive comfortably after your exam.

There is an additional fee of \$40 for the Optomap retinal imaging as it is not covered by insurance companies. This fee is due at the time of your exam service. It is an eligible expense for FSA/HSA accounts.

Patient Name: _____

Date: _____

_____ I ELECT TO HAVE THE OPTOMAP RETINAL SCREENING

PLEASE INITIAL ONE

_____ I DECLINE TO HAVE THE OPTOMAP RETINAL SCREENING
